## RIBSAM'S HIGHER QUALITY LAWN GRASSES

**A Mixture For Every Soil and  
 Shade Condition**

### TESTED-FRESH-RELIABLE

Cheap seed is false economy. It often spells discouraging failures and unnecessary expense. They are usually composed of annual grasses which are hard to cut and contain large quantities of impurities such as chaff and weed seed. Play safe and get the best.

### RIBSAM'S "EVERGREEN" LAWN GRASS SEED

From yearly comparative trials, has proved to be unsurpassed for first-class and permanent results. We use only the very finest varieties of the most suitable grasses, thoroughly re-cleaned, free from all chaff and weed seeds. This seed will produce a green, smooth, velvety sod free from such varieties of common grasses as produce clumps and knots on the lawn, which so frequently spoil the desired smooth and deep effect.

### RIBSAM'S "CHOICE" LAWN GRASS SEED

This is composed of choice selected grasses, with White Clover, of neat compact growth and will produce fine sward.

 100 lbs. \$20.00**

### RIBSAM'S "SHADY NOOK" LAWN GRASS MIXTURE

Usually it is quite difficult to obtain a satisfactory growth of grass under trees and in shady places. For sowing in such places we recommend the use of this special mixture. It will quickly produce an abundant and even growth of beautiful green grass. The grasses used in making this special mixture are only those that are well adapted for growing in shade.

 100 lbs. \$28.00**

### RIBSAM'S "TERRACE" GRASS SEED

Realizing the difficulty experienced by the majority of lawn makers in getting a thick turf which will hold the soil on terraces and high slopes and prevent washing by heavy rains, we have, after much experimenting, established a mixture which admirably fills this need. This mixture has been carefully blended so as to contain various grasses of rapid, dense, even growth and strong root system which will insure a permanent, beautiful slope.

# Your Gardening Success Is Our Desire

Picture at right shows results of test reported in Technical Bulletin 340 of the Bureau of Plant Industry, U. S. Department of Agriculture. Plant No. 6 fed all necessary elements. From each of others one element, as noted, was omitted from the culture.

## YOU CAN ACHIEVE RICH GARDEN BEAUTY!

You can grow beautiful lawns and flowers as pictured in this catalog. Disappointments are most often the result of half-starving or improperly feeding your plants.

Assure success by giving everything you grow a square meal of VIGORO.

Vigoro is different! It is a complete plant food that contains all of the elements plants must get from the soil instantly ready for the plant's use. Bone meal, manures, and sewage supply only one, two, or at most three elements and these must first be released for use by decay, a process that's slow in spring when plants need food most.

The picture of the government plant food experiment, reproduced below, lets you see why you'll get such wonderful results from Vigoro. Grown in cultures, these plants show what happens when any one of the necessary elements is missing in the soil. This year use clean, odorless Vigoro and be sure your plants are properly nourished.
